I. Overview

This document discusses the current process of Puregold JDA ERP.

II. Objectives

To have a knowledge and have an overall view of the existing Puregold JDA ERP system

III. Scope

Puregold JDA ERP modules:

1. Company Maintenance
2. Store Branch Maintenance
3. Vendor Maintenance
4. Vendor Maintenance Allowance
5. Item Hierarchy
6. Item Maintenance
7. Product Inventory
8. Price Change Management
9. Cost Change Management
10. Purchase Order
11. Auto Replenishment
12. PO Receiving
13. Store to Store transfer
14. Return to Vendor
15. Inventory Adjustment
16. Make-up/Break up
17. Sales Audit

IV. Functional Process

Below are the high – level process for each of the existing modules in the current JDA ERP of Puregold.

1. Company Maintenance
    a. Setup for company details
    b. Header information for each company in the system
    c. Each company has its own store branches, clustering, pricing and ordering.
    d. Company will be regarded as Chain that pertains to all of its stores during process that applies on terms of level.

e. Company to identify their buyer

2. Store Branch Maintenance
   a. Setup for store branches for each registered company
   b. Store details are maintained such as Store code, Store Name, pricing zones and what Crossdock that serve the store.
   c. What vendors assigned for primary and alternate for the store.
3. Vendor Maintenance
   a. Setup for all vendors
   b. Vendor details and other attributes like address and tagging if allowed for RTV
   c. Can either be set as a primary or an alternate vendor for a store
   d. Has its own set of SKUs for their items that will be used for POs, replenishments and inventory and other processes.
4. Vendor Maintenance Allowance
   a. Vendors will define for their SKU and its standard cost
   b. Vendor setup for additional discount besides the standard discounts
   c. Discount can be either in price or percentage and will be automatically computed when creating PO
   d. Computation for the additional discount as per define by vendor is separate from the computation of the original cost
5. Item Hierarchy
   a. One time setup of item hierarchy per Vendor
   b. Mapping of vendor and their items
   c. 4 levels of Item Hierarchy
      i. Department
      ii. Sub – Department
      iii. Class
      iv. Sub – Class – has 3 tiers fixed in 1 class only and as set by merchandising (101, 102,103)
6. Item Maintenance
   a. Item maintenance, can be updated if there are new items
   b. Item dynamic attributes definition like if the item is tagged as non-VAT or Vatable, its initial price and cost, its vendor and others.
   c. Additionally, an Item can also be tagged that has a listing fee or if that item is carried by a specific store – this will be used in the PO creation of that store.
7. Product Inventory
   a. Inventory maintenance for both warehouse and the selling area

b. Updated real-time depending on the factors affecting inventory like RTV, Adjustments, Sales, Store transfers and other.
c. Depending on the entered RA qty and cost, the cost will automatically adjust.
d. Once items are received in the WH and transferred to the Selling area, a merchandise issuance document is created.
e. If there are damage items it will be an RTV and return to the warehouse

8. Price Change Management
   a. Creation of item price update depending on event level
      1. Chain – all stores per company
      2. Zone – 3 types:
         i. Price club – all Puregold stores (supermarket / warehouse)
         ii. Extra – all extra stores (groceries)
         iii. Minimart – all minimarts (convenience stores)
      3. Store – store level
   b. 2 Types of PCA (Price Change Activation)
      1. Regular – has a start date but no end date
      2. Promo – has both start and end date
   c. Price change can be scheduled or planned
   d. Can be defined by either price or percentage
   e. If percentage, the system will automatically compute for the amount.
   f. If below the margin price – a warning message will be encountered for awareness
   g. If 2 or more PCA is created for a certain SKU, the latest event number will take place.
   h. After the end of the promo, the price will automatically go back to its regular price.
   i. A generated report will run every day with the details of Store, SKU, Price and Cost – for price comparisons
9. Cost Change Management
   a. Creation of cost update per vendor based on event level
   b. Updated by the vendors
   c. Masterdata will define cost based on the given amount given by the vendor
   d. An event is created after each cost change for tracking and reference
   e. Both for the Primary and alternate vendor
10. Purchase Order
    a. Regular PO
       i. Ordering is in case basis, can add items or list of SKUs from the vendor
       ii. Have the details for buyer number, vendor number. Location, SKUs, qty to order
       iii. Can also be through manual PO

iv. In the system, buyer code and buyer name is maintained.
v. Have controls/restrictions that will be applied for checking the PO creation like gross margin should not be low or in negative for the item and a warning will be encountered.
vi. SKU must be active to be included in the PO creation
vii. In an Auto PO creation SKUs that falls under the restrictions will be automatically be removed in the PO.
viii. After a successful PO posting, it will be exported as CSV to be imported by iConnect

b. DSD (Direct to Store Delivery)
   i. Accessible in store
   ii. No PO needed
   iii. User to enter Invoice number in the module and a blank PO will be opened
   iv. User can enter details --- SKUs, qty and other details
   v. A DSD listing is created for review before posting (RA)
c. OTB (Open to Buy)
   i. Used for Fashion category in the stores
   ii. PO created must be within the allocated budget per quarter
   iii. Available budget after PO can be carry over to the next quarter PO

11. Auto Replenishment
    a. Central WH for replenishment
    b. Automatically create a PO according to the set schedule per vendor for each store.
    c. Suggested orders will depend on the updated sales and other parameters like inventory goals, in-transit orders and others.
12. PO Receiving
    a. Regular order
       i. Module wherein the scanned cases are automatically inputted through the HT
       ii. Validation of qty of cases if equal or less than
       iii. Each scanned barcode of the item via terminal and the qty will be entered.
    b. Mother PO
       i. Consolidation of 1 order for different stores
       ii. Received in Crossdock for allocation
       iii. Automatically allocate after physically receiving the mother PO based upon the PO creation.
       iv. After auto allocation, must create a per store transfer advice
       v. It will then be received by the store (RA) and adds to its inventory

13. Store to Store Transfer
    a. Auto allocation from the crossdock to the store
    b. Physical transfer of store to another store
14. Return to Vendor
    a. Module wherein user enters a SKU and its qty to be return to vendor with its reason code
    b. After posting, qty for each SKU will be automatically deducted to the current inventory and deducted from the cost payable
15. Inventory Adjustment
    a. Module wherein user can adjust the qty per SKU with its reason code
    b. Has the capability to upload
    c. Can also be through the annual physical count
16. Make-up/Break-up
    a. For promoted items
    b. New package/bundled will be assigned a new SKU or if the promoted item is not existing in the item maintenance in the store. (Make-up)
    c. Bundled either came from the suppliers or Puregold initialization
    d. If the bundle will not sell and will have a go ahead from the vendor to break – up to be sell individually
    e. For fresh cuts like prime cuts for meats, will be PO with the quantity in kilos
    f. Defined in the item maintenance the buying UOM and selling UOM (inventory)
    g. For other fresh produce, UOM are in pieces like apples, oranges
17. Sales Audit
    a. POS Sales Batch Upload
        i. After sales upload, will automatically deduct from inventory
        ii. File uploaded containing all sales for the day in a flat file
    b. Sales Balancing
        i. Module wherein the user can manually edit sales if missing but proven existing to balance the sales.

V. Difference from SCN ERP

1. MasterData
    a. Multiple Company under one Entity
    b. Use of List/Regular Price, Promo/Discounted Price
2. Purchase Order

a. Group ordering in one PurchaseOrder
b. Suggested Order formula

3. Auto Replenishment
    a. Scheduled generation (Selected days, dates, etc)
4. Inventory
    a. Multiple location within the same facility (warehouse and selling area)
        i. Maintains its own inventory
        ii. Can receive its own inventory
        iii. Transafer inventory between locations
    b. Make-up / Breakup : conversion from one SKU to another SKU
5. Sales Audit
    a. Batch file format
    b. Reports generated
